

# Participate in a study virtually, without leaving home!

Volunteers are needed to help doctors and researchers understand the experiences of people with dementia with Lewy bodies (DLB) and their caregivers during moderate to advanced DLB stages.

This research study aims to understand what to expect in later stages of DLB. It will also help identify what changes might suggest that someone is approaching the end of life, and how to make that time a good experience.

## Are you eligible?

- For individuals with at least moderate DLB and their main caregiver
- The person with DLB and the caregiver must be willing to participate as a pair
- After agreeing to participate, a screening call will include three brief questionnaires to make sure the volunteer pair meet all study criteria

## What's involved?

- Participate by **telephone, by video call, or in-person**
- Questionnaires about the experiences of a person with DLB and their caregiver, primarily answered by the caregiver
- Study visits will take place once every six months for up to three years

## Compensation

- Each pair will receive \$100 in compensation after each visit
